the effects on the visual periphery and near the outer limits of the visual field. In addition, the
peripheral vision is more sensitive to motion than to detail. This means that objects that may
be missed in the center of the visual field are more likely to be detected in the periphery. For
example, if you are driving and suddenly see a child run out into the street, you are more likely to
see them in the periphery than in the center of your vision. This is because the child’s movement
can be detected more easily in the periphery than in the center of your visual field.

Enforcement Management

In the enforcement of the new regulations, much more emphasis on the enforcement measures is placed on the prevention of non-compliance. The enforcement measures are aimed at ensuring compliance with the regulations, and the focus is on the prevention of non-compliance. The enforcement measures include inspections, investigations, and the imposition of penalties for non-compliance.
